1 (bases 1 to 663)
De, B.E., Lahaye, A., Ledoux, P. and Detroz, R.
Xylanase, microorganisms for its production, DNA molecules, process
of preparation and use thereof
patent: EP 0698667-A 1 28-FEB-1996;
SOLVAY (BE)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PAT 07-MAR-1997

TROPICALIS SEQUENCE ID: TEGG049199.plkSP6w
Sequencing Finner: BF
This sequence is from a Xenopus Gene Collection (XGC) library
Constructed by Aaron M. Zorn.
CDNA was oligo dT primed from 5ug of poly A+ RNA from egg.
ECORI-NOIL cut cDNA was then ligated into pCS107 with ECORI at the
S, end and Not1 at the 3' end.
Vector: pCS107; site 1: ECORI; Site 2: NotI
HOST: Escherichia coli Xil-blue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       BQ527682

Institute for Genomic Research (TIGR), Rockville, MD.
Genomic DNA isolated from broth cultures of E. histolytica
genomic DNA isolated from broth cultures of E. histolytica
using a method described by Clark and Diamond, LiS.
(1993) Entamoeba histolytica: a
method for isolate identification. Exp. Parasitol.
77:450.). The DNA was mechanically sheared to give a
tight size distribution (-2 kb). The v + i method used for
the library construction is described in detail in Smith,
H.O. and Venter, J.C. (Making small insert libraries for
whole genome shotgun sequencing; projects: In Genome
Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barell, Oxford University Press, 1999)."

Zorn.

CDNA was oligo dT primed from 5ug of poly A+ RNA from egg.

ECORIANOII cut CDNA was then ligated into pCS107 with ECORI at 5, end and Not1 at the 3' end.

Submitted (23-JUL-1999) Genoscope - Centre National de Sequencage :
BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr
- Web : www.genoscope.cns.fr)
Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) -
http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC
library (Dros BAC) was made by Alain Billaud at CEPH (Centre'
d'Etude du Polymorphisme Humain) with funding provided by a MRC
project grant. The DNA was prepared from embryos by Alain Bucheton
and Genevieve Payan. It has been constructed in the vector
pBeloBACII.

Sanger Xenopus tropicalis EST project 2001
TROPICALIS_SEQUENCE ID: TEGG021j23.q1kT7
Sequencing primer: T7
This sequence is from a Xenopus Gene Collection (XGC) library
Constructed by Aaron M. Zorn.
CDNA was oligo dT primed from Sug of poly A+ RNA from egg.
ECORI-NotI cut cDNA was then ligated into pCS107 with ECORI at the
5' end and NotI at the 3' end.
Vector: pCS107; Site 1: ECORI; Site_2: NotI
HOST: Escherichia coli XLL-blue.

AAQ73997;

The Bacillus pumilus PRL B12 xylanase gene presequence (AAQ73997) encoding the xylanase signal peptide (AAR92055) was incorporated along with the promoter sequence (AAQ73996) into vectors used for the expression of DNA (see AAT1610) coding for a mature, thermostable xylanase (AAR92053) of Bacillus sp. 720/1. The enzyme is produced in transformed hosts, pref. Bacillus licheniformis or B. pumilus, for use in the paper pulp, animal feed and baking industries. (Updated on 16-OCT-Xylanase; thermostable enzyme; paper; pulp; bleaching; feedstuff; baking; Bacillus derived xylanase active over wide pH range - used in treatment of paper pulp, animal feeds and in bakery goods. Bacillus pumilus; strain PRL B12 (ATCC 55443) Detroz R; Ledoux P, Claim 27; Page 70; 94pp; English. promoter; signal peptide; ss. 95AU-00025086 94BE-00000706 95BE-00000448 (revised)

The invention describes an isolated or recombinant polypeptide (1), having 50% or more identity to 190 300-1200 residue amino acid sequences (S1), given in the specification, over a region of 100 or more residues and the polypeptide as thermostable xylanase activity. (I) is useful for: dough conditioning, beverage production; as a mutritional supplement in animal feed; reducing lignin in a wood or a wood product; and for aliminating and protecting animals from a microorganism comprising xylan. The polymuclectide (II) encoding (I) is useful for amplifying nucleic acid encoding a polypeptide having a xylanase activity which involves amplifying (II) or its subsequence. (I) is useful for treating and preventing bacterial infection and fungal infection e.g. coccidiosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          antibacterial; fungicide; thermostable xylanase activity; dough conditioning; beverage production; nutritional supplement; animal feed; lignin reduction; wood product; xylan; bacterial infection; fungal infection; coccidiosis; gene; ds.
recombinant plasmids carrying the xylanase gene. A chromosomal fragment obtained from isolate pBPX1 was subcloned and expressed in Escherichia coli JM109. The sequence of the xylanase gene (as a 1022 bp Sau3A1 fragment) carried by a selected transformant is given in AAQ80923

                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            16 TIGAGGCTGTTTGTGATGTGTATTGGATTTGTGCTGACACTGACGGCTGTGCCGGCT

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABBS7737-ABB72072). The sequence data for this patent did not form part of the princed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention describes a nucleic acid (I) comprising a sequence capable of hybridising under stringent conditions to any one of 999 fully defined Arabidopsis thaliana sequences (I) as given in specification e.g., 360, 1137, 455, 219, 472 nucleotides, etc, or its fragment. (I) is useful as a hybridisation probe to complementary molecules in a cDNA library. (I) is also useful for generating genetically modified and transgenic organisms, usually plant cells and plants. A proten encoded by (I) is useful in screening assays to determine the effect of candidate inhibitors, activators or modifiers of the gene product. The protein is also useful for screening biologically active agents e.g., fungicides and insecticides. A genetically modified cell, comprising an exogenous nucleic acid, where the nucleic acid comprises transcription regulatory sequences operably linked to a sequence capable of hybridising under stringent conditions to (1) is useful in the study of genetic function and regulation. For alteration of the cellular metabolism and for screening compounds that may affect the biological function of the gene cor gene product. This sequence represents an Arabidopsis thaliana
                                                                                genetically modified organism; transgenic organism; plant;
inhibitor testing; activator testing; modifier testing; fungicide;
insecticide; genetic function; genetic regulation; cellular metabolism;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Yu Y;

The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV0010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a therapy for inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cancer in a patient; (f) assessing the prostate cancer has metastasized in a patient; (h) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indohence of prostate cancer in a patient; (i) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; prostate cancer; cytostatic; carcinogen; pharmacodyanamic marker; pharmacogenomic marker; gene; ss.
                                                     Human; prostate cancer; cytostatic; carcinogen; pharmacodyanamic marker; pharmacogenomic marker; gene; 88.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8
                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   23 TGTTGTTTTGTGATGTGTATTGGATTTTGTGCTGACACTGACGGCTGTGCCGGCTCATGCG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether progression of prostate cancer in b monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cancer in a patient; (f) assessing the prostate cancer in a patient; (f) determining whether prostate cancer has metastasized in a patient; (h)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Streptococcus; GAS; GBS; group B streptococcus; Streptococcus agalactiae; group A streptococcus; Streptococcus pyogenes; antibacterial; gene; antinflammatory; infection; vaccine; meningitis; gene therapy; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       assessing the aggressiveness or indolence of prostate cancer in a patient; (I) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       23 TGTTGTGTGTGTGTGTATTGGGTTTTGTGCTGACACTGACGGCTGTGCCGGCTCATGCG 81
                                                                                                                                                                                                                                                                                                                 Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0;

The invention relates to a protein (ABP25413-ABP30895) from group B creptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in the proteins have antibacterial and antiinflammatory activity. (1), nucleic acids encoding (1), ABN6604-ABN71526 and antibodies that bind (1) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (1) are used to detect Streptococcus in a compound binds to biological sample. (1) is used to detect Streptococcus in a compound binds to (1). A composition comprising (1) or a nucleic acid encoding (1), may be used to recombinantly produce (1) and may be caid encoding (1) may be used to recombinantly produce (1) and may be used in gene therapy. Antibodies to (1) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                          New Streptococcus protein for the treatment or prevention of infection or disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          732

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukemia, inflammation and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to human polymucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymocleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activity, insue of conser, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form part
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     65
